Dr. Brad Labrecque

Dr. Brad Labrecque received his dental degree in 1983 from the University of Saskatchewan. Dr. Labrecque lives and practices in Kamloops, B.C. He has actively used lasers in his practice for over 20 years focusing on minimally invasive dentistry. He was one of the first dentists in Canada to incorporate the WaterLase in private practice.

Dr. Labrecque is a founding member of the World Congress of Microdentistry. He lectures and trains clinicians worldwide on laser - assisted dentistry.

Dr. Labrecque has consistently maintained a high income practice; being in the top 10% of producers in Canada. His practice averages 50 new patients per month; he attributes this to the use of dental technology. Dr. Labrecque believes and has proven that TECHNOLOGY IMPROVES: SPEED, ACCURACY, PATIENT EXPERIENCE AND PRACTICE PROFIT.

Digital Workflow for the Modern Dental Office

Where do you start?

Understanding that dentistry is changing every month on new products and procedures how with the major technologies of today does one decide where to start the evolution in the general practice?

These procedures are not supported in the standard dental curriculum and the only exposure is mainly for the sales force tell you that is the best you can get .

Let this seminar help you decide what and where do you start in incorporating new technology in the GP practice. These instruments are expensive and need to be brought to the dental practice for maximum value to the clinic as of course our patients

These are the technologies that are available today in a general practice:

- caries detection
- soft tissue lasers
- erbium hard/soft tissue laser
- intraoral scanner.
- cad/cam restoration
- intraoral camera
- CBCT
- digital guided implant placement

Laser Certification: Hands on Surgical Application & Bio Stimulation

We invite you to join us for an informative day with Dr. Brad Labrecque, B.Sc. DMD as he shares his passion and expertise on Laser Dentistry and its effective implementation designed to enhance your Dental Hygiene Practice. Dr. Labrecque began utilizing soft tissue laser early in his clinical practice and has achieved great clinical outcomes. His study, training and practical experience make him a world class authority in Laser Technology. This specialization in Laser Dentistry has helped facilitate the certification of numerous Dental Health Professionals.

Course Objectives:

Participants who complete this course will receive certification recognized by the World Clinical Laser and Imaging Institute (WCLI), an institute internationally recognized as a leader in laser education. Attendees will gain full understanding of the use of lasers and learn how to effectively incorporate laser treatment protocols in their Dental Hygiene Practice.

Course Outline:

This workshop will give participants hands-on experience using: in vitro models, videos of clinical procedures will be viewed and Laser settings explained.

Laser Assisted Periodontal Therapy Training Course

Advanced Periodontal And Soft Tissue Training
